Harmonization of Seismic Hazard in Vrancea Zone Anton Zaicenco, Iolanda Craifaleanu, Ivanka Paskaleva, 2008-11-14 The NATO Science for Peace Project SfP 980468 Harmonization of Seismic Hazard and Risk Reduction in Countries Influenced by Vrancea Earthquakes was an ambitious attempt to harmonize the seismic hazard assessment in Bulgaria Moldova and Romania and provide the guidelines for seismic risk reduction in the target countries Related to the study of intermediate depth Vrancea earthquakes it became operational in 2005 The project co coordinators were as follows Prof G ney zcebe Ankara Turkey Dr Anton Zaicenco Chisinau Moldova Dr Iolanda Craifaleanu Bucharest Romania Prof Ivanka Paskaleva Sofia Bulgaria The project has brought together leading research personalities in the area of earthquake engineering seismology and earth physics from several countries for brainstorming sessions informal discussions and exchanges of ideas One of its key components was an upgrade of the strong motion seismic networks of the countries participants which created a foundation for a long term collaboration A number of papers have been published as a result of the work conducted under this project The present book contains the Proceedings of the Closing Workshop for Project SfP 980468 which was organized in Chisinau Moldova on May 20 2008 From hazard analyses to protection of the historical buildings from study of the dynamic properties of the soft soils to paleoseismology there are few areas of interest that remain untouched Research from the NATO members and partner countries in South Eastern Europe that forms the components of NATO Project SfP 980468 has made solid contributions to the Workshop theme **Multi-hazard Approaches to Civil Infrastructure Engineering** Paolo Gardoni, James M. LaFave, 2016-06-22 This collection focuses on the development of novel approaches to address one of the most pressing challenges of civil engineering namely the mitigation of natural hazards Numerous engineering books to date have focused on and illustrate considerable progress toward mitigation of

individual hazards earthquakes wind and so forth The current volume addresses concerns related to overall safety sustainability and resilience of the built environment when subject to multiple hazards natural disaster events that are concurrent and either correlated e g wind and surge uncorrelated e g earthquake and flood cascading e g fire following earthquake or uncorrelated and occurring at different times e g wind and earthquake The authors examine a range of specific topics including methodologies for vulnerability assessment of structures new techniques to reduce the system demands through control systems instrumentation monitoring and condition assessment of structures and foundations new techniques for repairing structures that have suffered damage during past events or for structures that have been found in need of strengthening development of new design provisions that consider multiple hazards as well as questions from law and the humanities relevant to the management of natural and human made hazards

National Earthquake Resilience
National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on Seismology and Geodynamics, Committee on National Earthquake Resilience—“Research, Implementation, and Outreach, 2011-09-09 The United States will certainly be subject to damaging earthquakes in the future Some of these earthquakes will occur in highly populated and vulnerable areas Coping with moderate earthquakes is not a reliable indicator of preparedness for a major earthquake in a populated area The recent disastrous magnitude 9 earthquake that struck northern Japan demonstrates the threat that earthquakes pose Moreover the cascading nature of impacts the earthquake causing a tsunami cutting electrical power supplies and stopping the pumps needed to cool nuclear reactors demonstrates the potential complexity of an earthquake disaster Such compound disasters can strike any earthquake prone populated area National Earthquake Resilience presents a roadmap for increasing our national resilience to earthquakes The National Earthquake Hazards Reduction Program NEHRP is the multi agency program mandated by Congress to undertake activities to reduce the effects of future earthquakes in the United States The National Institute of Standards and Technology NIST the lead NEHRP agency commissioned the National Research Council NRC to develop a roadmap for earthquake hazard and risk reduction in the United States that would be based on the goals and objectives for achieving national earthquake resilience described in the 2008 NEHRP Strategic Plan National Earthquake Resilience does this by assessing the activities and costs that would be required for the nation to achieve earthquake resilience in 20 years National Earthquake Resilience interprets resilience broadly to incorporate engineering science physical social economic behavioral and institutional governing dimensions Resilience encompasses both pre disaster preparedness activities and post disaster response In combination these will enhance the robustness of communities in all earthquake vulnerable regions of our nation so that they can function adequately following damaging earthquakes While National Earthquake Resilience is written primarily for the NEHRP it also speaks to a broader audience of policy makers earth scientists and emergency managers

Increasing disaster resilience is an imperative that requires the collective will of the nation and its communities. Although disasters will continue to occur, actions that move the nation from reactive approaches to disasters to a proactive stance where communities actively engage in enhancing resilience will reduce many of the broad societal and economic burdens that disasters can cause.

IRIS Newsletter, 2006 Artificial Intelligence, Geographic Information Systems, and Multi-Criteria Decision-Making for Improving Sustainable Development Sujoy Kumar Jana, Kamalakanta Muduli, Indrajit Pal, Purushottam Meena, 2025-08-12

The Asia Pacific region, home to some of the world's fastest growing economies, faces a range of complex challenges including environmental degradation, the increasing frequency of natural hazards, and rapid urbanization. Addressing these issues, which many countries across the globe are facing, requires innovative interdisciplinary approaches to promote sustainable development and enhance resilience. Geographic information systems (GIS) when combined with multi-criteria decision making (MCDM) techniques and advanced technologies such as artificial intelligence (AI) offer powerful tools to tackle these multifaceted problems. AIGIS integrates AI with GIS to derive insights from geospatial data. The fusion of AI techniques with GIS enhances data analysis, visualization, and decision making. Artificial Intelligence, Geographic Information Systems, and Multi-Criteria Decision Making for Improving Sustainable Development explores how these integrated tools can support decision making processes aimed at advancing sustainable development. Drawing on research and insights from diverse disciplines, the book looks at how GIS, MCDM, and AI can provide solutions for disaster risk reduction, environmental monitoring, urban planning, and natural resource management. Through diverse case studies and theoretical explorations, this book highlights the value of integrated geospatial tools in facilitating informed decision making and fostering resilient societies in the face of evolving challenges. It covers a wide range of topics including the following: Site soil geology assessments in Fiji; Flood risk analysis in Hong Kong; Air quality management in Delhi during the COVID-19 pandemic; Vegetation health monitoring in Thailand. Bringing together the work of academicians, practitioners, and decision makers, the book reflects the growing recognition towards effective and sustainable solutions to complex problems which require a multidimensional approach integrating scientific, economic, and social considerations. By providing the latest research and practical applications of MCDM, AI, and GIS, it contributes to ongoing efforts to build a more sustainable and resilient future for the Asia Pacific region as well as for the world.

Quantifying the social and economic value that geospatial information contributes to modern society is a complex task. To construct reliable and consistent valuation measures requires an understanding of the sequence of processes that starts with data acquisition and leads to decision makers' choices that impact society. GEOValue explores each step in this complex value chain from the viewpoint of domain experts spanning

disciplines that range from the technical side of data acquisition and management to the social sciences that provide the framework to assess the benefit to society The book is intended to provide foundational understanding of the techniques and complexities of each step in the process As such it is intended to be assessable to a reader without prior training in data acquisition systems information systems or valuation methods In addition a number of case studies are provided that demonstrate the use of geospatial information as a critical input for evaluation of policy pertaining to a wide range of application areas such as agricultural and environmental policy natural catastrophes e government and transportation systems
