book is the result of research from over fifteen countries asking which background and environmental factors influence
achievement in mathematics and science This research is based on data from the Third International Mathematics and
Science Study TIMSS which was conducted under the auspices of the International Association for the Evaluation of
Educational Achievement IEA in 1995 and 1998 In many countries researchers have started secondary analysis of the data in
search for relationships between contextual factors and achievement In these analyses two different approaches can be
distinguished which can be characterised by the metaphors of fishing and hunting In the fishing approach researchers begin
with an open mind considering all possible context variables as potentially influential Applying analysis techniques such as
regression analysis Lisrel PLS HLM and MLN they then identify important factors within their countries or across a number
of countries In the hunting approach researchers hypothesise certain context variables and trace the effect of these variables
