**PRACTICAL MACHINE LEARNING APPLICATIONS** Dr. Sachin R. Jadhav,Pritam Mondal,Ismail Keshta,Dr. Haewon Byeon,2023-09-18 It is not feasible to arrive at an accurate estimate of the total quantity of knowledge that has been accumulated as a direct consequence of man's activity Every single day millions of new tuples are added to the databases and each of those tuples represents an observation an experience that can be learned from it and a situation that may occur again in the future in a way that is comparable to the one it happened in when it was first observed As human beings we have the innate capacity to gain knowledge from our experiences and this is something that occurs constantly throughout our lives Nevertheless what does place when the number of occurrences to which we are exposed is more than our capacity to comprehend each of them What would happen if a fact were to be repeated millions of times but it would never happen precisely the same way again What would the results be What kind of outcomes may we anticipate It is a subfield of artificial intelligence that focuses on learning from experience or to be more specific the process of automatically extracting implicit knowledge from information that is stored in the form of data This subfield was named after the concept of learning from experience Machine learning which is sometimes shortened as ML and referred to in certain contexts as ML is sometimes referred to simply as ML In this study we will investigate two problems that have been solved in the actual world of business by using machine learning These problems were faced by companies throughout the globe Companies were tasked with overcoming both of these obstacles The first of these responsibilities is to provide an accurate forecast of the final product quality that will be supplied by an oil and gas refinery which is discussed in Section 2 The second component is a model that as will be covered in Section 3 may be used in order to acquire an estimate of the amount of wear and tear that will be experienced by a collection of micro gas turbines This will be accomplished by calculating the amount of wear and tear that can be expected from the collection of micro gas turbines In the phrase that follows we will talk about the theoretical components that are essential for the creation of our solutions An explanation of the ML approaches that we have used may be found in Section 1 1 for any reader who is interested in reading it and would want to read it
