Computational Structural Engineering Yong Yuan, Junzhi Cui, Herbert A. Mang, 2009-06-05 Following the great progress made in computing technology both in computer and programming technology computation has become one of the most powerful tools for researchers and practicing engineers It has led to tremendous achievements in computer based structural engineering and there is evidence that current developments will even accelerate in the near future To acknowledge this trend Tongji University Vienna University of Technology and Chinese Academy of Engineering co organized the International Symposium on Computational Structural Engineering 2009 in Shanghai CSE 09 CSE 09 aimed at providing a forum for presentation and discussion of state of the art development in scientific

Handbook of Thermal Process Modeling Steels Cemil Hakan Gur, Jiansheng Pan, 2008-12-22 An Emerging Tool for Pioneering Engineers Co published by the International Federation of Heat Treatment and Surface Engineering Thermal processing is a highly precise science that does not easily lend itself to improvements through modeling as the computations required to attain an accurate prediction of the microstructure and properties of work pieces is sophisticated beyond the capacity of human calculation Over the years any developments in thermal processes relied largely on empiricism and traditional practice but advancements in computer technology are beginning to change this Enhances the quest for process optimization Comprehensive and authoritative the Handbook of Thermal Process Modeling of Steels provides practicing engineers with the first complete resource that meets the needs of both those new to modeling and those hoping to profit from advances in the field Written by those with practical experience it demonstrates what is involved in predicting material response under industrial rather than laboratory conditions and consequently gives heightened insight into the physical origins of various aspects of materials behavior Encourages both the understanding and the use of real time process control Before the advent of sophisticated computers the errors inherent in computational predictions made modeling an ineffective gamble rather than a cost saving tool Today modeling shows great promise in both materials performance improvements and process cost reduction The basic mathematical models for thermal processing simulation gradually introduced to date have yielded enormous advantages for some engineering applications however much research needs to be accomplished as existing models remain highly simplified by comparison with real commercial thermal processes Yet this is quickly changing Ultimately those engineers who can move this tool of improvement out of the lab and onto the factory floor will discover vast
