Childhood, Elementary, and Secondary Education, 2010 *Kid's Eye View of Science* Susan Kovalik, Karen D. Olsen, 2010-09-08 Examines learning science from multiple perspectives including the child's perspective guides readers through the steps of igniting students' natural sense of wonder incorporating brain research integrating science concepts with other subjects and applying science to daily life demonstrates how to teach science conceptually through the lens of big ideas such as change interdependence and adaptation

Science Literacy in Primary Schools and Pre-Schools Haim Eshach, 2006-08-12 Science is more than a compilation of facts and figures although one would not know that from observing classroom lessons in science in elementary schools in many parts of the world In fact there are those who argue that science is not appropriate subject content for the early grades of elementary school There are many schools in which science is simply not present in the earliest grades Even where science is taught in the earliest grades it is often a caricature of science that is presented to the children This book offers a vigorous reasoned argument against the perspective that science doesn't belong in the early grades It goes beyond that in offering a view of science that is both appropriate to the early grades and faithful to the nature of the scientific enterprise Dr Eshach is not a voice in the chorus that claims young children's developmental lack of readiness for such study He believes as do I that in order to learn science one must do science At the heart of the doing of science is the act of exploration and theory formation To do science we must explore the ways in which the world around us looks sounds smells feels and behaves
